

TerraWave Solutions® 700-2700 MHz 2-Way Splitter with N-Style Jack Connector

TerraWave’s antenna splitters are designed to divide or “split” the RF signal from one radio to multiple antennas. The splitters are perfect for applications that require coverage of two different areas with a single access point or bridge. TerraWave’s splitters are designed for the 700-2700 MHz marketplace. The units’ rugged design and small footprint make them ideal for most bridging and LAN applications. Every TerraWave splitter is covered by the Company’s one-year warranty program.
